

SOLAR GARDEN LIGHT

ECOSAVERS[®]

**SOLAR GARDEN LIGHT
STAINLESS STEEL**

EcoSavers® Solar Garden Light Stainless Steel

EcoSavers® present a new kind of garden light where the solar cell is integrated into the body of the unit. This ensures that the solar panel remains clean and delivers optimum performance.

The high performance solar cell uses day- and sunlight to generate energy. The light will switch on automatically when it is dusk thanks to the built in light sensor.

The 'bubble light' effect and the strong stainless steel base give the EcoSavers® Garden Light a stunning look and great performance.

The garden light can easily be planted into the ground using the integrated spike so you can place the garden light anywhere you want.

Specifications
